

Personalysis® Summary

Sean Porter

Eventbrite

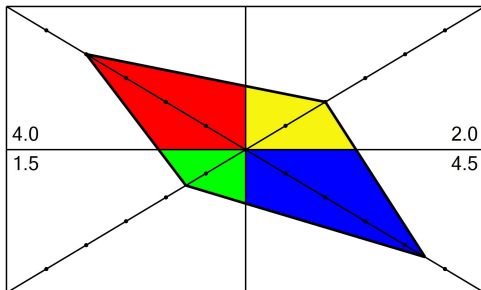

Rational

Preferred style

Sean likes innovative, problem-solving roles. Values variety and developmental opportunities. In approach, is alert and individualistic, quick and frank. When leading, uses diagnostic skills, provides suggestions, and keeps busy on objectives. Is up-to-date on organizational trends and is available for consultation. Plans and works on information-related tasks to get things done. Frustrated when too much structure hinders independent action.

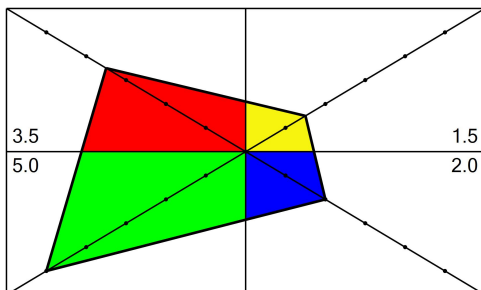

Socialized

Communication expectations

Sean expects leaders and others to explain the goal and give freedom to act. They should provide an environment rich with variety. If approached right, will be a self-starter and take action. Expects to communicate own ideas and deal with immediate objectives. To overcome problems, questions and looks for new solutions. Focuses on ways to make things happen. Does not respond well to those who are not clear about what to do and discourage questions.

Instinctive

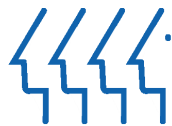

Motivational needs

Sean needs to regulate activities, take charge and obtain trustworthy results. Motivated to know the facts and figures, establish guidelines, and plan actions. In decision making, is analytical and practical. With experience, decision-making is faster. Under pressure, holds firm to policy and keeps others on target. Self-confidence is increased as things are done correctly and concluded. Frustrated with loss of command and control.

about your personalysis report

Your Personalysis Report is based upon answers you provided in the Personalysis Questionnaire, and it is not influenced by age, race, sex, education, or religion. It is a scientific management tool that explains why and how you feel, think, and act under varying levels of pressure.

Personalysis is an assessment of your unique personality. It is composed of a complex mix of behaviors that you use to create success and to be effective. There is no single perfect, ideal, average, or standard profile. Your personality is very special -- neither better nor worse than any other. It is simply different.

To get more from your Personalysis report, view the interactive guide at www.personalalysis.com/guide. Your user code for the guide is: **ytqk fxts xqqx**

The animated graphics, interactive exercises, and video segments reinforce key elements of your report.

what you will find in your report

- **preview (on the facing page):**

a one-page summary that captures the essential themes of your personality.

- **colors, numbers, clusters and dimensions (pages 2-3):**

basic information necessary to understand your behavior under various levels of stress, the color-coded behavioral shorthand of your personality, how colors are measured, and how two colors together form a cluster with special meaning.

- **instinctive dimension (pages 4-5):**

identifies the powerful motivating forces that affect your self-esteem and sense of well-being. Your basic needs must be met for you to feel effective and secure. When you are upset or concerned, look to this dimension to define the underlying cause, and then identify a solution.

- **socialized dimension (pages 6-7):**

describes how you learned to interact with others. It defines the expectations you have of yourself as well as of others. This is the dimension you use to gather information and to extend cooperation.

- **rational dimension (pages 8-9):**

reveals the way you most enjoy interacting with your world. You use this information to identify both appealing and frustrating job activities.

- **negative behaviors (pages 10-11):**

provides insight into your defensive and self-defeating behaviors.

- **peak performance (pages 12-13):**

offers strategies to enhance your personal and professional success.

colors, numbers, and clusters

The colors

The use of colors provides a quick means to understand your behavior in a nonthreatening way. There are no good or bad colors, and every individual is a combination of colors. When you use the color-coded shorthand, you can improve communication and productivity.

Act Independent Be in charge Direct approach Task-driven	Adapt Interdependent Be Involved Responsive approach Relationship-driven
Analyze Autonomy Be in control Reserved approach Methods-driven	Assess Freedom Be informed Questioning approach Information-driven

The numbers

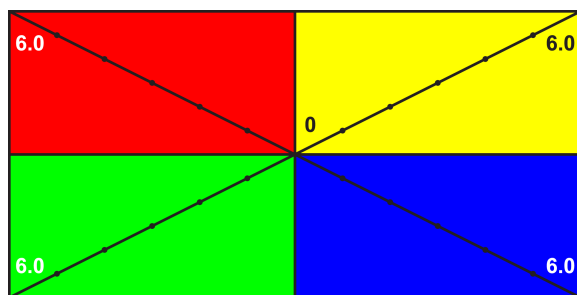

Each color is measured along the diagonals in half-point increments. The high numbers represent strengths, while low numbers indicate potential blind sides:

0.0 - 2.5 Low intensity

3.0 - 3.5 Moderate intensity

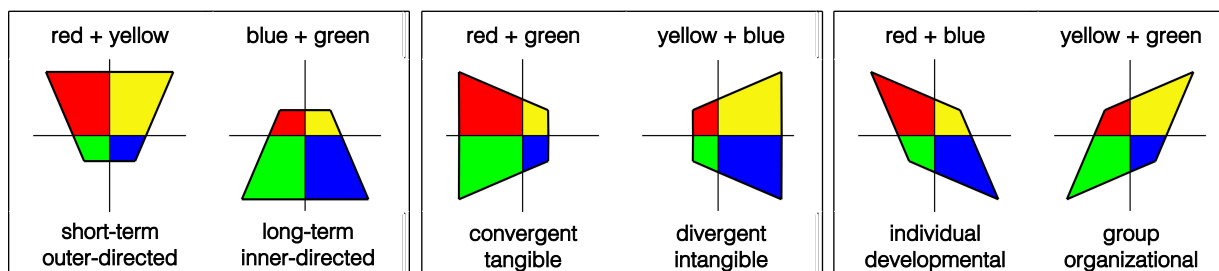

4.0 - 6.0 High intensity

In each dimension, the total will always be 12 points.

The clusters

Each person is best described as having some combination of colors. When any two colors have a score totalling 6.5 or greater, you obtain a cluster with special meaning, as shown below:

dimensions

Personalysis offers a more complete picture of your personality. Where other profiling instruments provide data on one or two levels of personality, Personalysis captures three productive and two negative dimensions. The result is a more accurate assessment. The Personalysis difference is the ability to go further, provide greater detail, and give a more thorough interpretation.

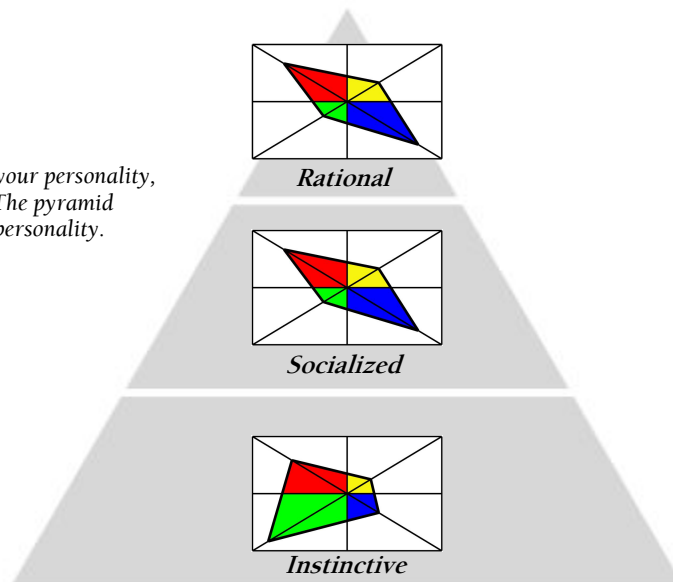

Rational

The dimensions of your personality have a relationship that is best understood as a hierarchy of needs. To illustrate this relationship, your profile is shown on this page within a pyramid. At the top of the hierarchy is the Rational dimension. Always positive in expression, this preferred style provides the greatest satisfactions in life. To achieve this dimension, lower-level needs must be satisfied first.

Socialized

The Socialized dimension is adaptive behavior that has been learned. The positive dimension reveals how you learned you ought to deal with situations and interact with others. The negative side, on the other hand, shows how you learned you ought to resist and defend yourself when you are frustrated.

To understand the interaction of the different parts of your personality, it is useful to consider your profile within a pyramid. The pyramid helps demonstrate the hierarchy of needs within your personality.

Sean Porter

Instinctive

The Instinctive dimension at the base of the pyramid is the foundation on which all else depends. These personality resources govern the way you instinctively evaluate and deal with life's circumstances. They ensure your safety and effectiveness. Generally nonverbal and internalized, these survival instincts generate strong emotions and drive positive motivation. The negative expression of this dimension reveals self-protective fear and anger triggered when needs are threatened or denied.

It is important to recognize that the comfort and stability of your base, your Instinctive dimension, must be assured before you can move to higher levels of self-expression.

basic information about the instinctive dimension

Your Instinctive dimension—your basic nature—is the foundation of personality. It is the core of your survival needs, concerns, and motivating forces. Largely subconscious and intense, these feelings usually are not verbalized, yet they influence all activity in your life. These explain why you do what you do. Personalysis makes this subconscious self visible as represented by the high color scores.

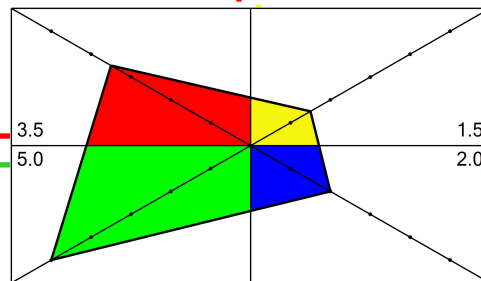

Your Instinctive dimension forms the roots of motivation, confidence, commitment, and self-worth. At home, most people move to this level to recharge their energy and are likely to exhibit these color traits more openly. At work, however, these are underlying drives that must be satisfied, even though they usually are more implicit than explicit.

Authoritative

Motivated to achieve short term goals. Needs to act and use a sense of urgency. Values independence and a chance to be in charge. Uses personal authority to make decisions. Relies on tangible results to measure success and self-worth.

Flexible

Motivated to achieve consensus within the group. Needs to have influence and stay adaptive. Values flexibility and uses opinions of group to arrive at decisions. Relies on positive group feedback to measure success and self-worth.

Motivated to achieve control and predictability. Needs to have territory clearly defined and boundaries protected. Values autonomy. Uses past experience and justifiable facts to analyze risk and make decisions. Relies on consistency and order to measure success and self-worth.

Motivated to achieve understanding. Needs time to access and identify alternatives. Values freedom. Uses multiple sources of information to make decisions. Relies on understanding and close, consultative relationships to measure success and self-worth.

Controlling

Understanding

The statements above apply to you strongly in the colors where your scores are 4.0–6.0 and moderately where your scores are 3.0–3.5. The statements do not apply to you where your scores are 0.0–2.5.

instinctive

Sean Porter

Motivation

Sean is strongly motivated to maintain control and increase security. Feels the need to stay on familiar ground. Longs to rely on what is certain and guard against that which appears to be untested or different. Wants to know the facts and stay in charge of priorities. Protects ability to achieve predictability in order to do things right.

To use care while making sure that things are done right comes naturally. Empowered when able to prepare, work in a disciplined way, and get a measurable outcome. Tries to be sure the power that pushes outward is more than matched by the regulatory power from within. Desires to move ahead at a consistent pace and be accountable.

Learning

In learning, Sean applies thought process that primarily features an analytical approach. The intent is to buy time and limit risk. When trying something new, uses an analytical process, looks at the downside first, and draws on trial and error. Rehearses methods or means that work while discarding faulty tendencies. Relies on repetition to deal with historical events, dates, and other particulars.

Feels more effective if able to employ personal experience and precedent that provides justification to go forward. Benefits from feedback and positive reinforcement to gain competency and add to the store of information. Wants to feel safe before giving self permission to put the knowledge or skill into effect. Satisfaction increases with the development of a reliable base.

Decision-making

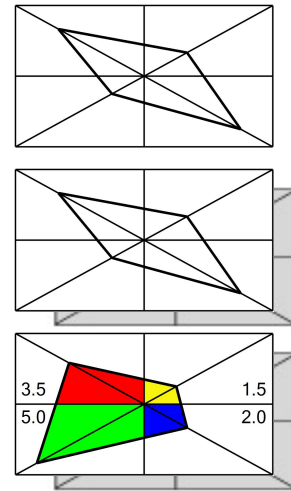

In making decisions, Sean needs to collect the data. Values an opportunity to organize thoughts and consider what could go wrong. Is reluctant to take unnecessary chances and lose ability to affect a positive outcome. Listens for “what” and “how.” Examines the pros and cons and checks cost factors. Personally examines any issue in doubt. Structures what has to be done.

Implements decisions after analyzing the facts and figures. Would rather wait than pursue an unexamined course of action. Consolidates position and works to meet obligations. Tracks what happens to get trustworthy results. Does not want to be hurried. Becomes anxious if others force premature activity, interrupt continuity, or violate boundaries.

Change

When dealing with change, resists making alterations of plans, policies, or arrangements unless they are warranted. Feels threatened with shifting conditions. To be on guard and to stay with that which is proven are uppermost in thought. Maintains tension between starting and stopping, going forward and holding back. Is more comfortable with what has worked in the past.

Under pressure, Sean fears uncertainty and becoming vulnerable. Assesses for what is wrong or unlike prior experience. Opposes new ways of doing things unless others back off and give a chance to evaluate. Could be strengthened by team building with someone who is more flexible under stress and is able to take a big-picture approach.

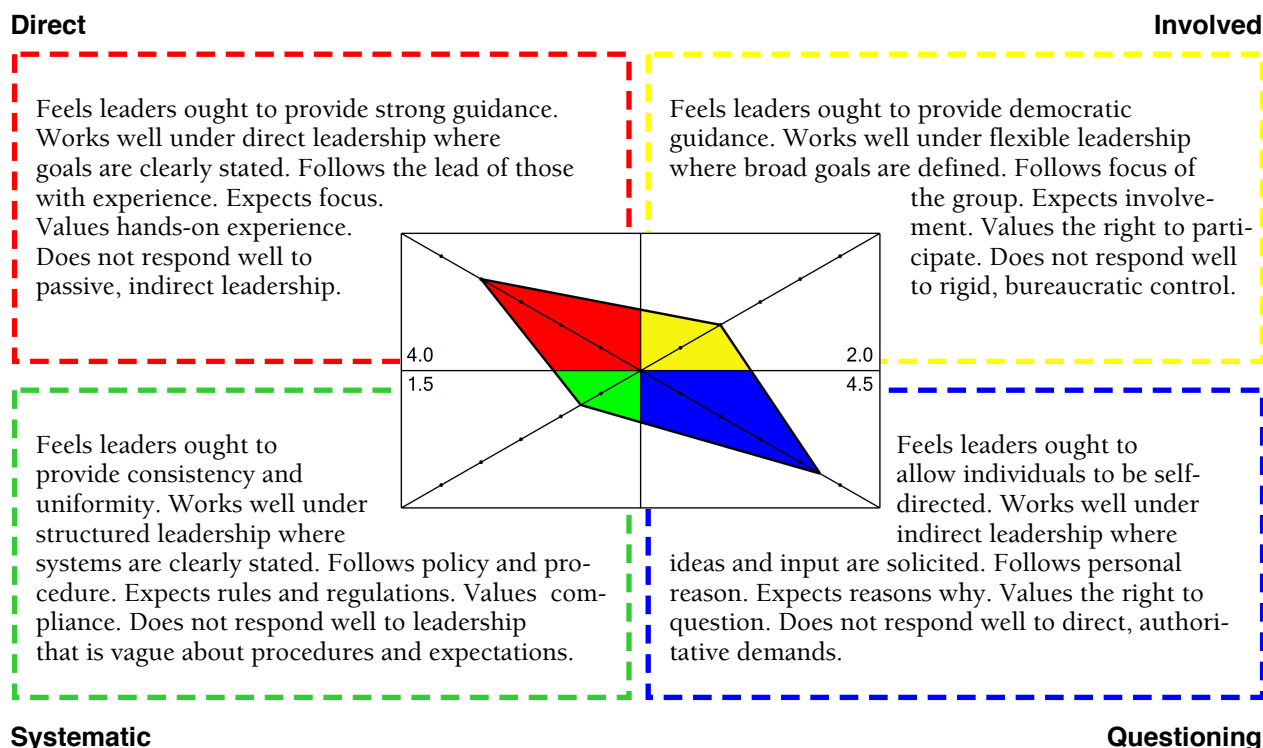

basic information about the socialized dimension

Your Socialized dimension—your second nature—comprises the way you learned to interact with others, especially authority figures and those you perceive to have power over you. It also represents how you expect to be treated in order to gain your cooperation.

Each of us gathers information in a different manner. If others get on “your channel,” it sounds good. But if they communicate to your low color, their approach could create resistance. Not only what is said, but how the message sounds creates reluctance or willingness to respond.

Your Socialized dimension is also a backup style of behavior, denoting what you ought to be, think, and do. It often provides personality resources either not available or less strongly present in the other two dimensions. In problem-solving, it draws from reason, emotion, and experience.

The statements above apply to you strongly in the colors where your scores are 4.0–6.0 and moderately where your scores are 3.0–3.5. The statements do not apply to you where your scores are 0.0–2.5.

socialized

Sean Porter

Self-expectations

Sean expects to work with those in charge and understand their assumptions, purposes, and methods. Without experience, thinks you should focus on the intentions of authorities. Believes you ought to be informed and follow a plan of action based upon their ideas.

With experience, takes the liberty to know, to think, to believe, and to speak freely. To be up-to-date, to advance alternate suggestions, and be self-managing are strong expectations. When given a chance to participate, has the power to assess the situation, identify better avenues for success, and employ expertise. Will demonstrate keen discernment while resisting notions that may not work.

Expectations of others

Sean expects that leaders and others ought to seek input from fellow associates and apply their insights when useful. Follows the lead of those who are entrepreneurial and stimulate the thinking of associates. Expects those in charge to empower their people. They should exercise a mentoring style and provide training and opportunities for development.

Those who use common sense and inspire others to be self-directed will be respected. An effective response is made possible, therefore, by leaders who try to develop their followers and help them to think and act for themselves. Does not react well to those who fail to get buy-in.

Cooperative response

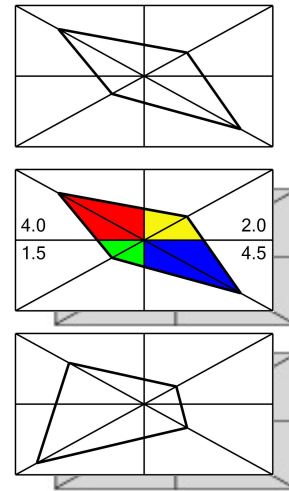

When others explain what is to be done and why, Sean will use an incisive mind and work smart. Has learned you should put diagnostic talent to good effect and avoid guilt by taking an energetic action. Feels you ought to anticipate what to do and inquire into the particulars. It is second nature to examine the underlying issues and dialog to improve perspective.

To overcome problems, Sean draws on inquisitive nature and deals with off-target conditions. Is exceptional at catching and improving ideas. May resist those who do not give others a stake in the outcome; but, if approached right, will use innovative ways and try to stay proactive.

Communication: right and wrong approaches

We learn how to gather information and interact with others early in life. Sean can readily relate to those who are inquisitive, innovative, and keep an open mind. But may misread those who are structured, formal, and methodical. May distort their behavior as being overcontrolling, closed-minded, and legalistic.

Their steady style may be mistaken for being stiff and unresponsive. Is not at ease with people who are matter-of-fact and may misperceive them as boring and tiresome. To relate to Sean, remember to exchange ideas, dialog alternatives, and give feedback.

basic information about the rational dimension

Your Rational dimension—your preferred nature—comprises behavior you choose of your own free will. In this stress-free mode, you experience a sense of self-mastery. You also pursue activities that provide the most satisfaction. When you take advantage of the strong colors of this dimension, you are able to use your most comfortable style. The behaviors of this dimension should be reinforced by education, training, and job placement.

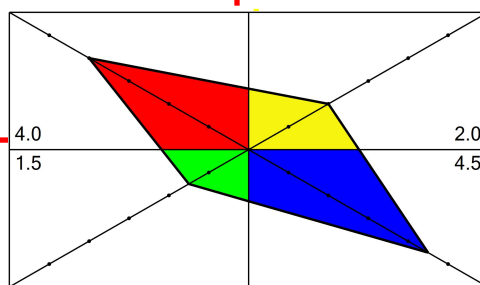

You cannot use the strengths of the Rational dimension until the secondary needs of the Socialized dimension and the primary needs of the Instinctive dimension are met. Only then can your energy flow into this comfort zone where you feel confident, cooperative, and challenged.

Authoritative

Enjoys take-charge roles. Prefers to be direct and focused in approach. Is concerned about practicality. Likes to implement and give authoritative leadership. Gets things done by being task-oriented and maintaining direction.

Democratic

Enjoys communication-oriented roles. Prefers to be flexible and adaptive in approach. Is concerned about teamwork. Likes to delegate and give democratic leadership. Gets things done through organizing and coordinating strengths of others.

Enjoys control-oriented roles. Prefers to be cautious and reserved in approach. Is concerned about documentation and details. Likes to monitor and give systematic leadership. Gets things done through following up and structuring activities.

Enjoys problem-solving roles. Prefers to be mentally active and creative in approach. Is concerned about innovation.

Likes to consider alternatives and give indirect leadership. Gets things done through planning and developing ideas.

Structured

Self-Directed

The statements above apply to you strongly in the colors where your scores are 4.0–6.0 and moderately where your scores are 3.0–3.5. The statements do not apply to you where your scores are 0.0–2.5.

rational

Sean Porter

Preferred style

Sean is an individualistic person who likes to plan and direct a program of work. Employs an enterprising style and enjoys dealing with developmental challenges. Comes across in an insightful fashion while managing the risks of an undertaking. Seeks to grasp the underlying features or principles of changing conditions and map the future.

Takes pleasure in the stimulating journey toward beckoning aspirations. To combine creativity with action is a strength. Does not want to be structured or to be restricted to a set way of doing things. These behaviors, as well as the ability to ask penetrating questions and to alter the use, purpose, or form of things, foster a sense of self-mastery.

Style limitations

Because Sean is so change-minded and individualistic, others at times may interpret this as being ivory-towered, unconstrained, or too independent. Such a transformational style could be misunderstood when a conforming approach may be indicated. There is a time to be visionary and there is a time to adjust to the ways of others.

Since a self-sufficient mode of action is not always appropriate, Sean may need to shift styles consciously. Find behaviors in other dimensions that show more adaptability and compliance and are less likely to be perceived as too self-absorbed, isolated, or the like. Another option is to team build with someone who comes across as more sociable and accommodating.

Satisfying job activities

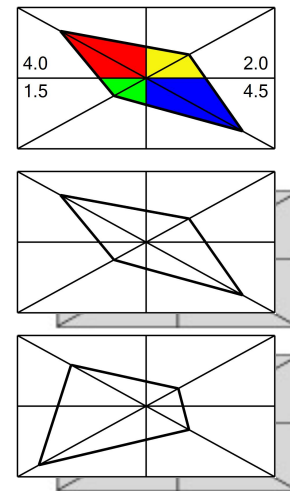

We are able to operate in our comfort zone when we have had our basic needs met and are in positions that utilize the strengths of our preferred style. Broadly speaking, Sean prefers innovative and problem-solving roles. Enjoys job functions that call for dealing with novel concepts, using entrepreneurial skills, and pursuing creative interests. Values a chance to be engaged in experimental projects.

Is challenged when using diagnostic abilities and understanding phenomena. Likes to generate modifications while bringing things to a higher state. To deal promptly and artfully with unique situations or difficulties provides gratification. These talents, as well as potential to build for today and improve for the future, contribute to peak performance.

Frustrating job functions

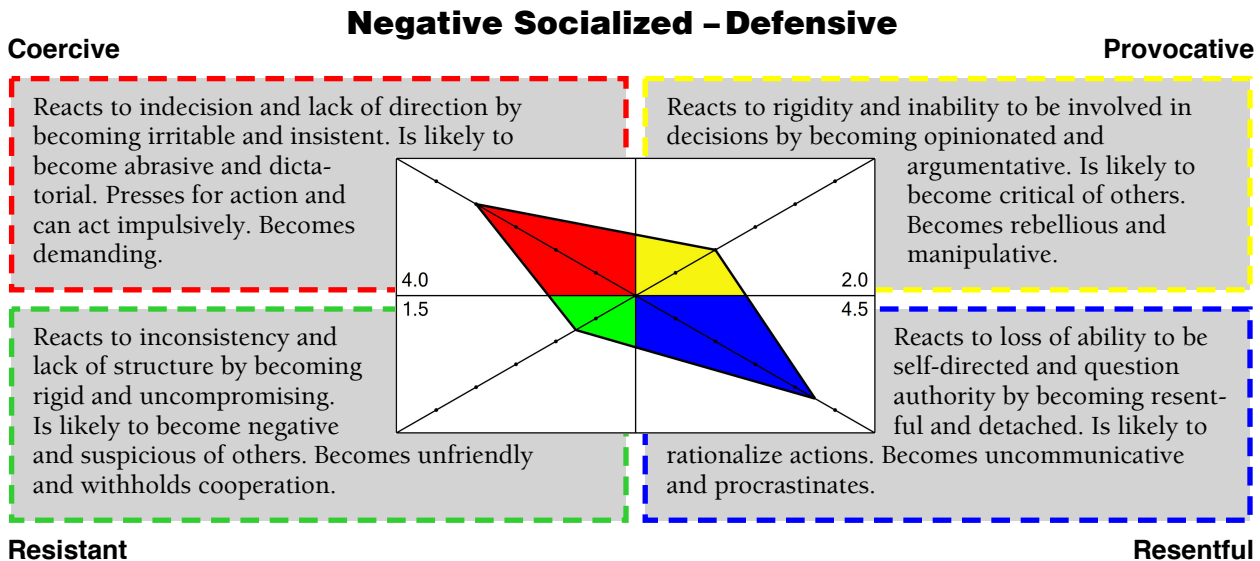

Generally, Sean should not choose roles that limit freedom and require complying with a prescribed way to do things. Dislikes methodical, repetitious tasks. Should keep clear of duties that call for bureaucratic procedures. Does not enjoy restrictions to individualistic and developmental pursuits. Assignments that utilize rigid regulations that discourage ability to think or behave independently should be avoided.

In addition, has a distaste for jobs that focus on impersonal processes that curb creativity. Cannot readily sacrifice an inquisitive nature to the demands of conformity. Any functions that accent uniformity rather than diversity, sameness instead of novelty, or maintaining as opposed to changing do not draw on Sean's strengths.

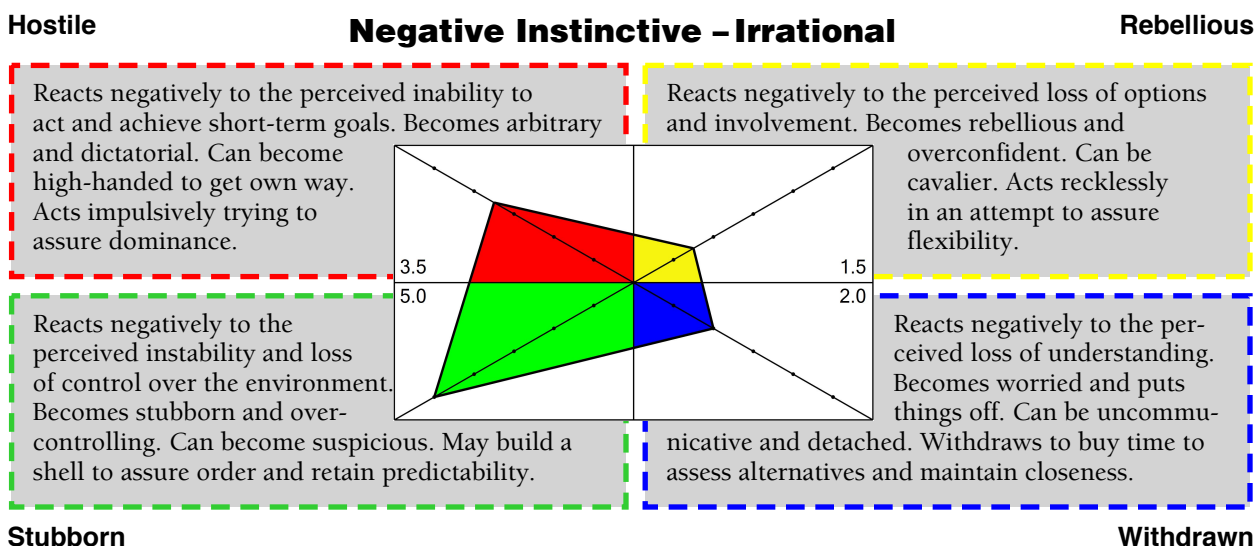

basic information about negative behaviors

Negative behaviors are outward symptoms of insecurity, frustration, fear, or anger. They can be triggered when you work in a frustrating job role, perceive threatening communications, or feel your instinctive survival needs are at risk. Then you experience the concerns of an insecure self. When stress becomes overwhelming, negative energy drains your emotional and mental resources creating the reactive defensive behaviors.

If anxiety increases, fear and anger generate the self-destructive, irrational behaviors.

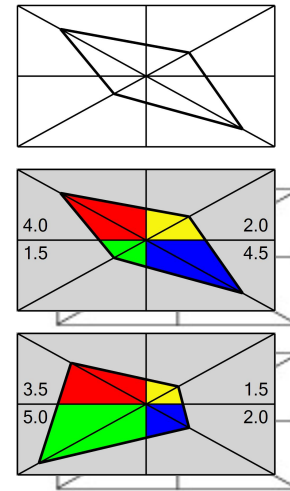

The statements above apply to you strongly in the colors where your scores are 4.0-6.0 and moderately where your scores are 3.0-3.5. The statements do not apply to you where your scores are 0.0-2.5.

negative behaviors

Sean Porter

Some stress cannot be avoided. For a short time, it even may be productive. Under functional stress, Sean is concerned about maintaining power and control. Dislikes facing the loss of order and control. Hates to take unexamined risks and become vulnerable. Feels the need to become quiet, exercise restraint, and stay with familiar practices. When the leader and others become the caretakers of these concerns, fears, and distress symptoms, they help reduce anxiety and make greater productivity possible.

Defensive Behavior

The defensive, negative behaviors are used as a stall system or the first line of defense to manage an uncomfortable situation. When doubtful, insecure, or frustrated, Sean feels anxious and easily rankled. Reacts by becoming resentful and antagonistic. Is upset by lack of explanation or own input. Loses ability to be realistic and resourceful. May put things off and rationalize. Usually is independent and dynamic, but now can flare and hurt the feelings of others. Feeling threatened, is unable to be objective and fails to listen.

Intervention strategies

Leaders should recognize the role they play if Sean's performance is poor. They should not overreact. Neither should they become critical nor add to the conflict. Rather, they need to stay rational and explain the situation. It would help to ask for input and answer questions. The intent is for Sean to feel engaged, understand what needs to be done, and put ideas into action.

Irrational Behavior

Each of us becomes angry with people or those situations that make us fearful. Sean fears being confronted with unexpected problems and being unable to act effectively. Does not want to be surprised. If leaders do not address these anxieties, they could trigger irrational behavior. If Sean becomes unduly distrustful, comes across as stubborn, or is constantly negative, distress is obviously out of hand. Other symptoms could include: harboring resentment, dwelling on past negative experiences, or exhibiting similar conduct that results from fear. No one purposely chooses to act in an irrational manner. To provide for recovery, you must deal with the concerns and fears.

Corrective strategies

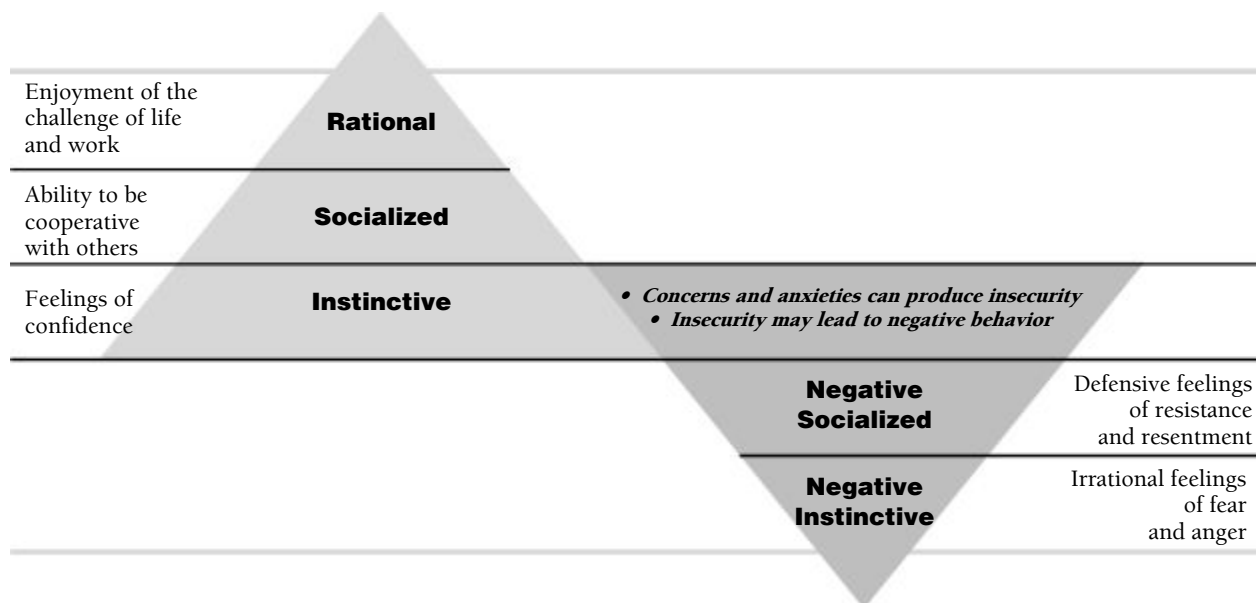

Leaders should focus on methodology, be detailed and specific, and allow time to sort information. Avoid generalities, unnecessary interruptions, or assuming too much. Remember that Sean has a basic need to gain control, show strength of commitment, and perform in a consistent manner. When underlying expectations are met, reinforced, and channeled, Sean can be free to devote attention to detailed operations and limit adverse effects. Wants to prevent any loss or deterioration of resources while fulfilling needs for achievement, security, and accountability.

applying personalysis for peak performance

Personalysis is based on an energy model of personality. Before you can become self-actualized and enjoy peak performance, energy must flow freely among the Instinctive, Socialized, and Rational dimensions. When your primary needs are met, you feel confident (Instinctive). When you feel confident, you have the energy to cooperate (Socialized) with others. When you are able to cooperate with others, you have the energy to enjoy the challenges (Rational) of life and work.

In the pyramid model, positive and negative behaviors are emotion-driven. Frustration and fear choke the positive flow of energy and draw it downward. The reactive behaviors are expressed as resistance and resentment in the Negative Socialized dimension and as fear and anger in the Negative Instinctive dimension.

Positive behaviors of peak performance

Negative behaviors

Knowledge of how your colors interact at each level gives you power to manage yourself and deal with others more effectively. You always operate from one dimension at a time and from one color at a time. Moreover, you unconsciously shift styles by using different dimensions and colors as your circumstances change or as you experience stress.

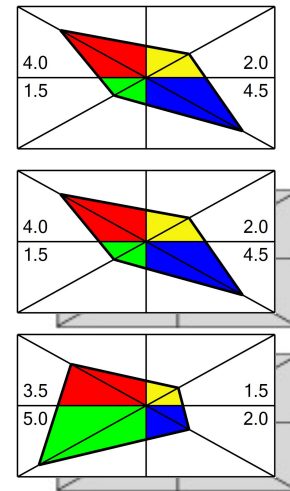

Personalysis gives you a tool to understand how to shift styles consciously to access the color strengths at various levels needed to be effective. You do not have to be a victim of the forces that trigger negative behavior because Personalysis provides the roadmap to use the positive behavioral resources you need to achieve peak performance.

peak performance

Sean Porter

Steps to achieve peak performance

- Fulfill your instinctive needs on a daily basis to build confidence.
- Draw upon socialized behaviors to relate to and cooperate with others.
- Seek job roles that challenge and utilize your strengths.
- Guard against reactive behaviors and emotions that may be self-defeating and nonproductive.

Challenge

If you feel good about yourself, you have a sense of mastery. You are able to live in your comfort zone, enjoy your job, and use your preferred style. Sean prefers developmental and action-oriented roles. Takes pleasure in dealing with novel concepts and solving problems. Delights in pursuing creative interests and being engaged in experimental or entrepreneurial projects.

In working with others, comes across as an individualistic, resourceful person. Likes to think in a dynamic manner and find solutions to questions in doubt. Combines thoughts with deeds. May opt for independent duties. Employs a strong and self-reliant style. Has capacity to deal with variety and implement front-running ideas. Thinks quickly. Marches ahead with a convincing sense of purpose.

Cooperation

To gain cooperation and limit resistance, you must meet the expectations of the person with whom you are dealing. In doing so, you set the stage for a static-free response. Sean expects to have input and share what is going on. Is more likely to go along willingly if leaders and others ask their associate to express own beliefs. They should answer questions and dialog to increase buy-in.

When given a say about what has to be done, Sean thinks quickly and probes how to improve things. Examines consequences of different scenarios while drawing on know-how. Applies a penetrating focus. Develops a practical plan and is energetic in the application of effort. Does not respond well to those who do not empower fellow workers and enable them to be self-managing.

Confidence

To achieve a sense of security, everyone must fulfill basic emotional needs on a daily basis. You must respect what each person requires to feel confident. This is the key to motivation, decision making, and trust. Sean is strongly motivated to be occupied in structured activities and make sure things are done according to specifications. Uses time-tested procedures.

Self-confidence is increased with ability to gather the data and check it for error. Evaluates for costs versus benefits and goes ahead when there is certainty about what can be done. The main theme centers on the drive for power and control. This highlights the desire to know when to start and when to stop, and when to hold back and when to move forward to keep things stable.
